Weed Management Exercise

Agricultural/Wildlife Case Study
Location

Project Site: cultivated 80 acre site on undulating terrain (prairie potholes), Aspen parkland ecoregion on loamy soil, adjacent to native grassland on 3 sides.

End Land Use: habitat for Baird’s Sparrow (good-excellent range condition) and Loggerhead Shrike (grass-shrub complex) within 5 years; also late summer/fall grazing for cow-calf pairs within 3 years.
Location
This plant is very common in your field.
This plant is found at the – in large quantities on your map.
This plant is found all over your restoration, in small quantities.
This weed is found everywhere on your restoration site
