

WETLANDS FIGHT CLIMATE CHANGE

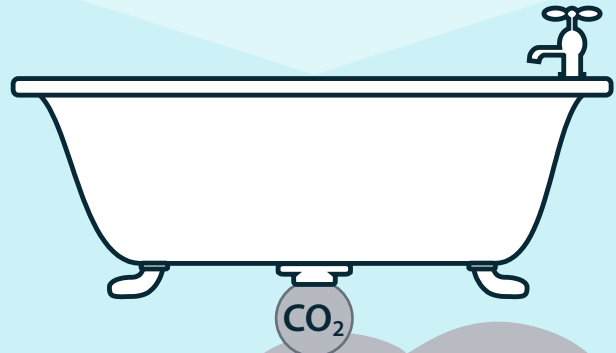

WETLANDS

are like bathtubs that trap and store carbon, so they **protect us from climate change**

WETLAND DRAINAGE

releases CO₂ into the atmosphere, which **creates more climate change issues**

DRAINING WETLANDS = MORE CLIMATE CHANGE

In Canada, we lose up to 80 acres of wetlands every day.
That's like adding the CO₂ emissions of over **200 cars** to the road every day.
